### Details of Facilities are in Annexure 1

### **Detailed Rationale**

The rating reaffirmation to the bank facilities of Ostwal Phoschem (India) Limited (OPIL) continues to derive comfort from its experienced management with strong group support, comfortable and stable financial risk profile, improving revenue profile along with healthy and range bound profit margins, strong brand presence & marketing network along with locational advantage. However, the rating strengths are partially offset by working capital intensive nature of operations, exposed to regulatory risk, scale and profitability susceptible to volatility in raw material prices and vagaries of agro-climatic conditions.

## **Press Release**

### **Key Rating Sensitivities:**

- Upward Factor
  - Substantial and sustained improvement in revenue & profitability leading to overall improvement in debt protection metrics.
- Downward Factor
  - Any unplanned debt led capex and/or any substantial decline in revenue and/or profitability impacting the debt protection metrics or liquidity.

### Key Rating Drivers with detailed description

### **Key Rating Strengths**

### Experienced Management with strong group support

The Ostwal Group is promoted by Mr. Mahendra Kumar Ostwal, Chairman and Managing Director of the Ostwal Group, who has over three decades of experience in the fertilizer industry and is assisted by his sons, Mr. Pankaj Ostwal and Mr. Praveen Ostwal. The group concern includes Ostwal Phoschem (India) Limited (OPIL), Krishana Phoschem Limited (KPL), Madhya Bharat Agro Products Limited (MBAPL), Season International Private Limited (SIPL) and Shree Ganpati Fertilizers Limited (SGFL). The group companies benefit in terms of experienced management with financial support from the parent company and their established position in the fertilizer industry.

### Comfortable and stable financial risk profile

The group has had a comfortable and stable capital structure over the last three account closing dates backed by scheduled repayment of term debt obligations and accretion of profit to net worth. The overall gearing ratio as well as TOL/TNW has increased during FY23 to 0.94x and 1.61x respectively (FY22:0.56x and 0.83x respectively) due to additional working capital borrowings. The debt protection metrics of the company remained comfortable marked by interest coverage of 10.61x as on March 31, 2023 (FY22: 14.79x). and TOL to TNW stood 1.61x as on March 31, 2023 (FY22: 0.83x). IVR expects debt protection metrics to remain comfortable due to absence of any debt led capex as well as stable profitability.

## **Press Release**

### Improvement in revenue and stable profitability:

Ostwal group's revenue has improved by 45% during FY23 to Rs.1,542.69crs led by increase in volume with additional capacities of MBAPL along with higher realizations. During FY23, IVR expects Ostwal groups revenue to improve further with benefits of additional capacities of KPL. The EBIDTA margin of the group also remained stable during FY22 and FY23 at 20.35% and 19.51% respectively due to stable cost , PAT margins also remained stable in FY23 and FY22 at 11.37% and 11.71% respectively .

### Strong Brand Presence & marketing network

The group derives its revenues from three main product streams (Single Super Phosphate, H. Acid, Sulphuric Acid) across 5 states namely Rajasthan, Madhya Pradesh, Chhattisgarh, Gujarat, and Maharashtra. The company initially until March 31, 2018, was marketing its fertilizers through Shriram Fertilizers and Chemicals (SFC) a unit of DCM Shriram Limited, however, due to change in policy from April 01, 2018, of subsidy claim where manufacturer will get subsidy instead of marketing company as well as discontinue of use of brand name of marketing its fertilizer products under its agreement with SFC. The company has been marketing its fertilizer products under its own brand name of "ANNADATA" since then and has an in-house marketing team of approximately 50 personnel spread across the country. The company also has a network of approximately 1500 dealers and distributors and 10,000 retail outlets where the company's products are supplied. Diversified Product Portfolio: the group has diversified its product range of fertilizers with its product portfolio consisting of organic fertilizers along with chemical fertilizers such as single super phosphate (SSP), Benefited Rock Phosphate (BRP), S. Acid, H. Acid, and others.

### Strategically located plant along with expected incremental benefit from the capex in KPL:

The manufacturing units of the KPL are strategically located in the vicinity of Agri economy dominated states. The marketing team of KPL is spread across pan India level and any demand for the SSP and BRP can be completed with minimum lead time. Further, the Company has started manufacturing of its rich value-added highly demanding products DAP & NPK complex fertilizer variants regions in India with installed capacity of 330000 MTPA. The company will be producing different variants of NPK fertilizers in the same unit by changing raw materials and / or their proportion and perhaps the process conditions, wherein the project

## **Press Release**

can deliver a variety of NPK fertilizers based on market requirement except Urea. The plant will further add integration of the existing facility and will provide economies of scale.

### Location advantage

Location advantage with plants in interior areas to facilitate better access to consumer markets as the manufacturing facilities of Ostwal group are in interiors of Rajasthan and Madhya Pradesh which ensures good rural coverage in those areas and better connectively and ease of logistics for distribution purpose. The manufacturing plant's strategic locations also provide better access to end-user markets, along with lower freight costs against competitors.

### **Key Rating Weaknesses**

### Working capital intensive nature of operations

India is an agricultural country, and the fertilizer industry is dependent upon agricultural produce in the country, with any unfavorable climatic changes can impact the overall demand for fertilizers. OGI is not an exception, the products manufactured by the company are highly dependent on onset of monsoon & other climatic conditions in the country. Owing to this seasonal nature of its business, the group needs to maintain comfortable inventory levels as reflected by inventory days of 98 and 118 in FY22 and FY23, respectively. However, debtor days are comfortable with the prudent collection process at 48 days and 59 days in fiscal years FY22 and FY23 respectively. However, the overall operating cycle stands moderately comfortable and expected to remain in the projected period as well.

### Exposed to regulatory risk:

Since Ostwal group operates in a highly regulated industry, the selling prices of its products are dependent upon the subsidy allocated by the Government of India to various nutrients. The company's operations, thus, remain exposed to any sharp variations in the subsidy amount and delays in receipt of the same, apart from any other regulatory intervention on product prices.

### Scale and profitability susceptible to volatility in raw material prices and vagaries of agro-climatic conditions

4

## **Press Release**

Prices of key raw materials such as rock phosphate and sulphuric acid have linkages with the global market and exhibit volatility with change in international prices as well as foreign exchange rates. Since Ostwal Group needs to maintain adequate inventory due to the seasonal nature of the fertiliser and seeds industry, the stocked inventory is exposed to inventory price risk, given the volatility in raw material prices. Moreover, group's scale of operations and profitability also remain susceptible to agro-climatic conditions in the country since the demand for seeds and fertilisers in India is generally influenced by the monsoons

### Analytical Approach :Consolidated

For arriving at the rating, Infomerics has considered the consolidated financial profiles of OPIL, MBAPL, KPL, SGFL and SIPL, together known as Ostwal Group of Industries (OGI), to arrive at the rating. The consolidation is on account of common management, similar line of business, and significant operational and financial linkages during the year.

### Applicable Criteria:

Rating Methodology for Manufacturing Companies Financial Ratios & Interpretation (Non-financial Sector) Criteria on Consolidation of Companies Criteria of Rating Outlook

### Liquidity: Adequate

The current ratio of the group remained comfortable at 1.55x as on March 31, 2023 (FY22: 1.77x). The company's cash flow from operation also remains adequate. The company is expected to generate sufficient cash accruals on the back of steady increase in operations as against the scheduled debt repayment. The liquidity of the company expected to remain adequate in the near to medium term. The average fund based working capital utilization of the group during the last twelve months ended May 2023 remains comfortable at around ~69.75% whereas non fund based working capital utilization remains comfortable at around ~60%. The company maintains a cash and cash equivalent balance of Rs.6.03 Crore as on March 31, 2023.
